

Expository Essay on Environment

Everything that exists around us is our nature. It includes all living and nonliving things in our environment. The lives of humans and animals depend entirely on the environment. It nourishes us. Our natural environment is being destroyed because of our evil deeds, which are a significant threat.

In pursuing development and prosperity, we are killing our natural environment. Our environment is the only way to grow. The lives of humans, animals, and birds are intertwined. We casually change the natural environment to the artificial environment.

Instead of greenery, planting, and natural resources, there are now artificial materials such as buildings, structures, roads, and cars. They exposed dangerous and harmful gases that pollute the environment.

As is well-known, the survival of life on this planet is possible only in a healthy environment. Selfish human activities are a significant threat to our healthy environment. Humanity has constantly been degrading parts of nature. He has been misusing the environment to achieve success and prosperity. Our lives are connected to all the features that exist in the background. The air we breathe continuously to survive, the water we usually drink is part of our nature.

Humans have destroyed the natural cycle of all parts of nature. The disruption caused by our environment affects the balance of the natural environment.

Environmental Threats

The environment in which we live is primarily affected by our activities. The significant threats in our area are as follows,

1. **Air pollution**
2. **Noise pollution**
3. **Water pollution**
4. **Soil pollution**
5. **Deforestation**
6. **Acid rain**
7. **Excessive use of technology**
8. **Little awareness/ignorance**
9. **Pursuing progress and development**
10. **Human activities are selfish.**

Artificial technological advances, in particular, are damaging the environment. It ultimately destroys the balance and equality of the biodiversity of all life on earth. All parts of our environment, including the hydrosphere and the lithosphere, are destroyed by artificial ecosystems. It means that

artificial technology is the only cause of the destruction of our environment. Environmental degradation is a global problem. It has had a devastating effect on our daily lives.

We suffer socially, economically, emotionally, and mentally. Pollutants have spread deadly diseases. The whole world is facing problems caused by the loss of nature.

Our environment is polluted by industrial waste. Agricultural waste, population growth, automotive smoke, plastic consumption, fuel burning. Environmental degradation is a global issue. If this problem is not addressed correctly, it will result in human losses. Excessive use of fuels to meet our needs kills our environment and its components such as air and water. Many air and waterborne diseases are on the rise. Lives are at stake. Acid rain causes damage to plants and animals. It also affects aquatic animals.

Solutions; How to Conserve the Environment?

- Planting or planting new trees will help save the environment.
- Reduce the use of non-renewable resources.
- Acceptance of proper waste disposal.
- The plastic block must be converted into movement.
- Provide environmental education to spread awareness among people to save the environment.
- We should not pollute water sources.
- Unnecessary logging should be prevented. Strict measures should be taken to stop deforestation and to clear trees.
- Better recycling of natural waste is needed to conserve the environment.
- There should be minimal pesticides, fertilizers, pesticides, and chemicals.
- We must work as a team to keep our environment clean.
- We must all actively participate in global environmental campaigns.
- Celebrate daily as nature day.

CONCLUSION

Our environment provides all the basic and essential ingredients of life. All the natural parts of our environment are essential. Modern technology and development have resulted in a dramatic increase in environmental degradation. The quality of aspects of the domain is at stake. It is declining at a rapid rate. Urbanization and deforestation play a key role in polluting the environment. Environment is a source of life. All parts of nature are our basic needs. Degradation is the death of every living thing on this planet. Our lives are built entirely on our natural environment. We must not change the natural environment into an artificial one. It is our first and most significant responsibility to save our place.
